# Area Identifier: Commodity Determination

In ARM, Commodity Determinations are used to request identification of commodities. ARM always routes Commodity Determinations to botanists.

As an Area Identifier, when you log into your Workspace, you will see the Commodity Determinations that have been submitted to your PIS in the "Diagnostic" section at the top of your screen.

# How to Recognize a Commodity Determination

Commodity Determinations can be recognized by the suffix number "CD." Diagnostic Requests, on the other hand, are appended with suffixes that start with "DR."

On the Workspace, the status of both Commodity Determinations and Diagnostic Requests is listed using the same terminology, as the example to the right shows.

# How to Acknowledge a Commodity Determination

In ARM, letting the person who submitted a Commodity Determination know that it has been received is called "Acknowledging Receipt." When you are prepared to complete the determination, you will "Accept for ID" the Commodity Determination.

The far right "Status" column shows where the Commodity Determination lies in the identification/recommendation process. When a Commodity Determination first arrives for the Area Identifier, its status will read, "AI Pending Specimen Receipt."

ARM allows you to acknowledge receipt and assign the Commodity Determination to the appropriate staff member without ever leaving the Workspace. Choose this path if you are not intending to accept the Commodity Determination for ID at the same time.

If you want to Accept the Commodity Determination for ID immediately, please go to the next section, <u>Accept for ID and Enter a Commodity Determination</u>.

# Click on the check box next to the Commodity Determination for which you would like to acknowledge receipt.

The row for this record will become highlighted green, as shown below:

Click on to display drop-down menu of the plants and pests in your personal database and select the commodity.

Commodity not on your list? Learn to add commodities to your ID list in the <u>Adding to your</u> <u>Determination list</u> section.

# **Recording ID Type and Method**

When you are recording an identification, ARM will ask you to specify authority. The authority types in ARM relate to who handles the Quarantine Recommendation and how the Diagnostic Request will be routed – whether it needs to be escalated beyond the local Plant Inspection Station. For guidance ID Types, see the ARM <u>ID Types</u> user guide.

**NOTE**: The **Submit** button will appear in the lower right corner when the ID Type field has been filled in – but you still must make sure you have completed all the required fields to actually be able to submit the Commodity Determination.

#### Method field default view

#### **Diagnostic Routing Type**

Diagnostic Routing Type is a required field. Diagnostic Routing Type has two values: "Digital Imagery" and "Morphological."

For some pest groups, the Tentative Digital Urgent Commodity Determinations/Diagnostic Requests in which Digital Imagery Routing has been indicated will route to a different National Specialist location than if the physical specimen is being sent for morphological identification.

Diagnostic Routing Type has two values: "Digital Imagery" and "Morphological." When the Area Identifier uploads images and uses Digital Imagery for the routing, an email is automatically sent to the appropriate National Specialist; the Area Identifier submitting the Commodity Determination will be copied on the email. If the National Specialist cannot make a determination using the images, they can request the physical specimen in ARM, which reroutes the Commodity Determination back to the Area Identifier workspace.

When the Area Identifier uploads images and uses Digital Imagery for the routing, the commodity determination is considered closed by ARM and an email is automatically sent to the appropriate National Specialist; the Area Identifier submitting the request will be copied on the email.

**<u>NOTE</u>**: During the digital routing process, the Commodity Determination leaves the Area Identifier's active view when it is sent to the National Specialist. Because the Commodity Determination has been completed by the Area Identifier, it is moved to the Area Identifier's completed view.

But if the National Specialist requests a physical specimen, the Commodity Determination reappears as "active" in the Area Identifier's workspace with a status of "AI Diagnostic Request in Progress."

AI Pending
Specimen
Receipt

When a Commodity Determination has been submitted with the "Tentative – Route to AI" ID types, the Workspace status will display as "AI Pending Specimen Receipt."

# Adding to your Determination list

If the commodity you are looking for does not appear in the drop-down menu, you can add it to the list. *Each time you add a commodity or pest, you will be building your permanent personal list, which will always be available to you.* 

Click on the magnifying glass at right , which generates the pop-up window shown below.

Determination *	
Select	• Q

#### By Taxonomic Name

To find the commodity, type several letters into the Taxonomic Name field. ARM defaults to select names that start with those letters.

USD	A United States Department of Agriculture		_	. ب ک
	Animal and Plant Health Inspection Service	Find Pest *

	Acknowledge Receipt * M			
T	axonomic Name			
	phal			
	Ctarta with	Containa		
C	) Starts with	<ul> <li>Contains</li> </ul>		

If you prefer, click on the "Contains" button to include names that contain those letters rather than start with them.

A list of taxonomic names will appear.

If you find the one you're looking for, click on the row, which will turn green. Click Select
