Exclusion Options

A Diagnostic Request (DR) will be available in the Exclusion Options section of the Workspace when the following conditions are met:

- When a Diagnostic Request has been completed by the Area Identifier.
- Document review and inspection are entered as complete by the Plant Health Safety Specialist.

PLEASE NOTE

ARM brings with it new terminology, such as "Diagnostic Request," or DR. In addition, certain forms used in the AQAS system, such as the PPQ 309 form, are no longer used in ARM. ARM's Diagnostic Request entity and the DR Routing Form contain the essential information from the 309. ARM's left-hand column (or drawer) contains all shipment information, which includes information that was on the 309 as well.

It is possible to make the determination and complete the Diagnostic Request (DR) without the DR appearing in the Exclusion Options section of the Workspace — because the inspection and documents are not complete. ARM automatically notifies the Plant Health Safety Specialist (PHSS) that the DR is complete, which will trigger action by the PHSS to take the next steps.

Getting to Exclusion Options

On the Workspace Exclusion Options is located below the Diagnostic Request section.

Exclusion Options Features

All the completed DRs with completed inspections and document reviews for your location are displayed on your Workspace under Exclusion Options.

Note: Throughout ARM when a field is grayed-out, it is not active. When a field is white, it can be filled in and revised.

Click on \checkmark to display drop-down menus.

- Select the number of records you would like to display. Five records is the default.
- Select which view you would like to display: Commodity or Diagnostic Request.
- ARM defaults to displaying all Diagnostic Requests that have received identifications, but you can choose to limit display to only the Active (awaiting Exclusion Actions) or Completed (those that have been assigned Exclusion Actions) Diagnostic Requests.

Views

ARM offers two ways to view Exclusion Options: by Commodity and by Diagnostic Request. The Commodity view is the default.

Click on \checkmark to display the drop-down menu, then select either Commodity or DR view. The Commodity view is the default view in ARM.

Commodity View

This view is especially useful when a commodity has multiple pests and multiple Diagnostic Requests.

In the Commodity View, at the top of every commodity record you will see a row that displays the exclusion actions available for that commodity. Note that the Available Exclusion Actions in the top line that encompasses all the DRs for the commodity reflects the Exclusion Actions below. This field will filter all the Exclusion Actions for the multiple commodities and let you know automatically which are available for all commodities.

For every commodity, the far right column will display either of two buttons, which reflect the DR's stage in the Exclusion process.

- 1. Before the Exclusion Actions are recommended:
- 2. After the Exclusion Actions have been recommended and the DR submitted:

. If you need to, you can make changes when necessary.

DR (Diagnostic Request) View

In the DR view, in the far right column you will see status information under "Exclusion Action Status."

Three status levels exist in this view during the Exclusion process:

- 1. Before Exclusion Action(s) is/are selected, the screen will display "Pending Selection."
- 2. After Exclusion Actions have been selected, the screen will display "Pending Submission" and these words will have become a link. To submit the DR, simply click on "Pending Submission."
- 3. When the DR has been submitted the status will change to "Submitted" and the words will not be a link.

Exclusion Options View by Diagnostic Request (DR)

<u>NOTE</u>: The only Exclusion Action status in the Diagnostic Request view that is a link is "Pending Submission." This link has the same functionality in the Diagnostic Request view

as **Submit** has in the Commodity view.

Regardless of which view you select, the steps for completing the Exclusion Options process are the same.

Why are the fields grayed out?

When fields are grayed out in the Exclusion Options section of the Workspace, you cannot act on the shipment. This is usually because the Plant Health Safeguarding Specialist has not completed the inspection. When the inspection is completed, the fields will be white and you can work them.

How to Complete the Exclusion Action Process

A record in the Commodity View is shown below.

Overview of Steps

- 1. The Commodity view is most convenient for multiple Diagnostic Requests on an article.
- 2. Begin with each Diagnostic Request for the commodity/article.
- 3. *After* completing all Diagnostic Requests for the commodity/article, then you select the Exclusion Action for the commodity/article.
- 4. After choosing the Exclusion Action options and (if applicable) treatment schedules, you next need to select the action to be presented by the Officer to the Broker/Importer on the EAN.
- 5. In the Commodity view, the top row "Available Exclusion Actions" drop-down menu shows the available Exclusion Actions that enable safeguarding of the

commodity/article so that a single action rather than multiple actions are not recommended.

Select the article. The record will turn green, as shown below.

Note that the drop-down menu for Available Exclusion Options reflects the selection (or lack thereof) for the Diagnostic Requests below:

Available Exclusion Actions	Selec
Not Selected	

The full expanded drop-down menu for Available Exclusion Actions before Exclusion Actions have been selected for the Diagnostic Requests in the shipment.
